Google + Microsoft + Twitter = The Next Web

```
Presentation presentation = new Presentation();  
presentation.Speaker = "George Nikolaropoulos";  
presentation.Start();
```

Who is that guy?

- Love Programming Languages
- Game Programming is a passion
- Addicted Gamer
- Worked in NYC and London
- CIO of Minettas Insurances

Our little enterprise web app

The Model

Polyglot Persistence

Cassandra

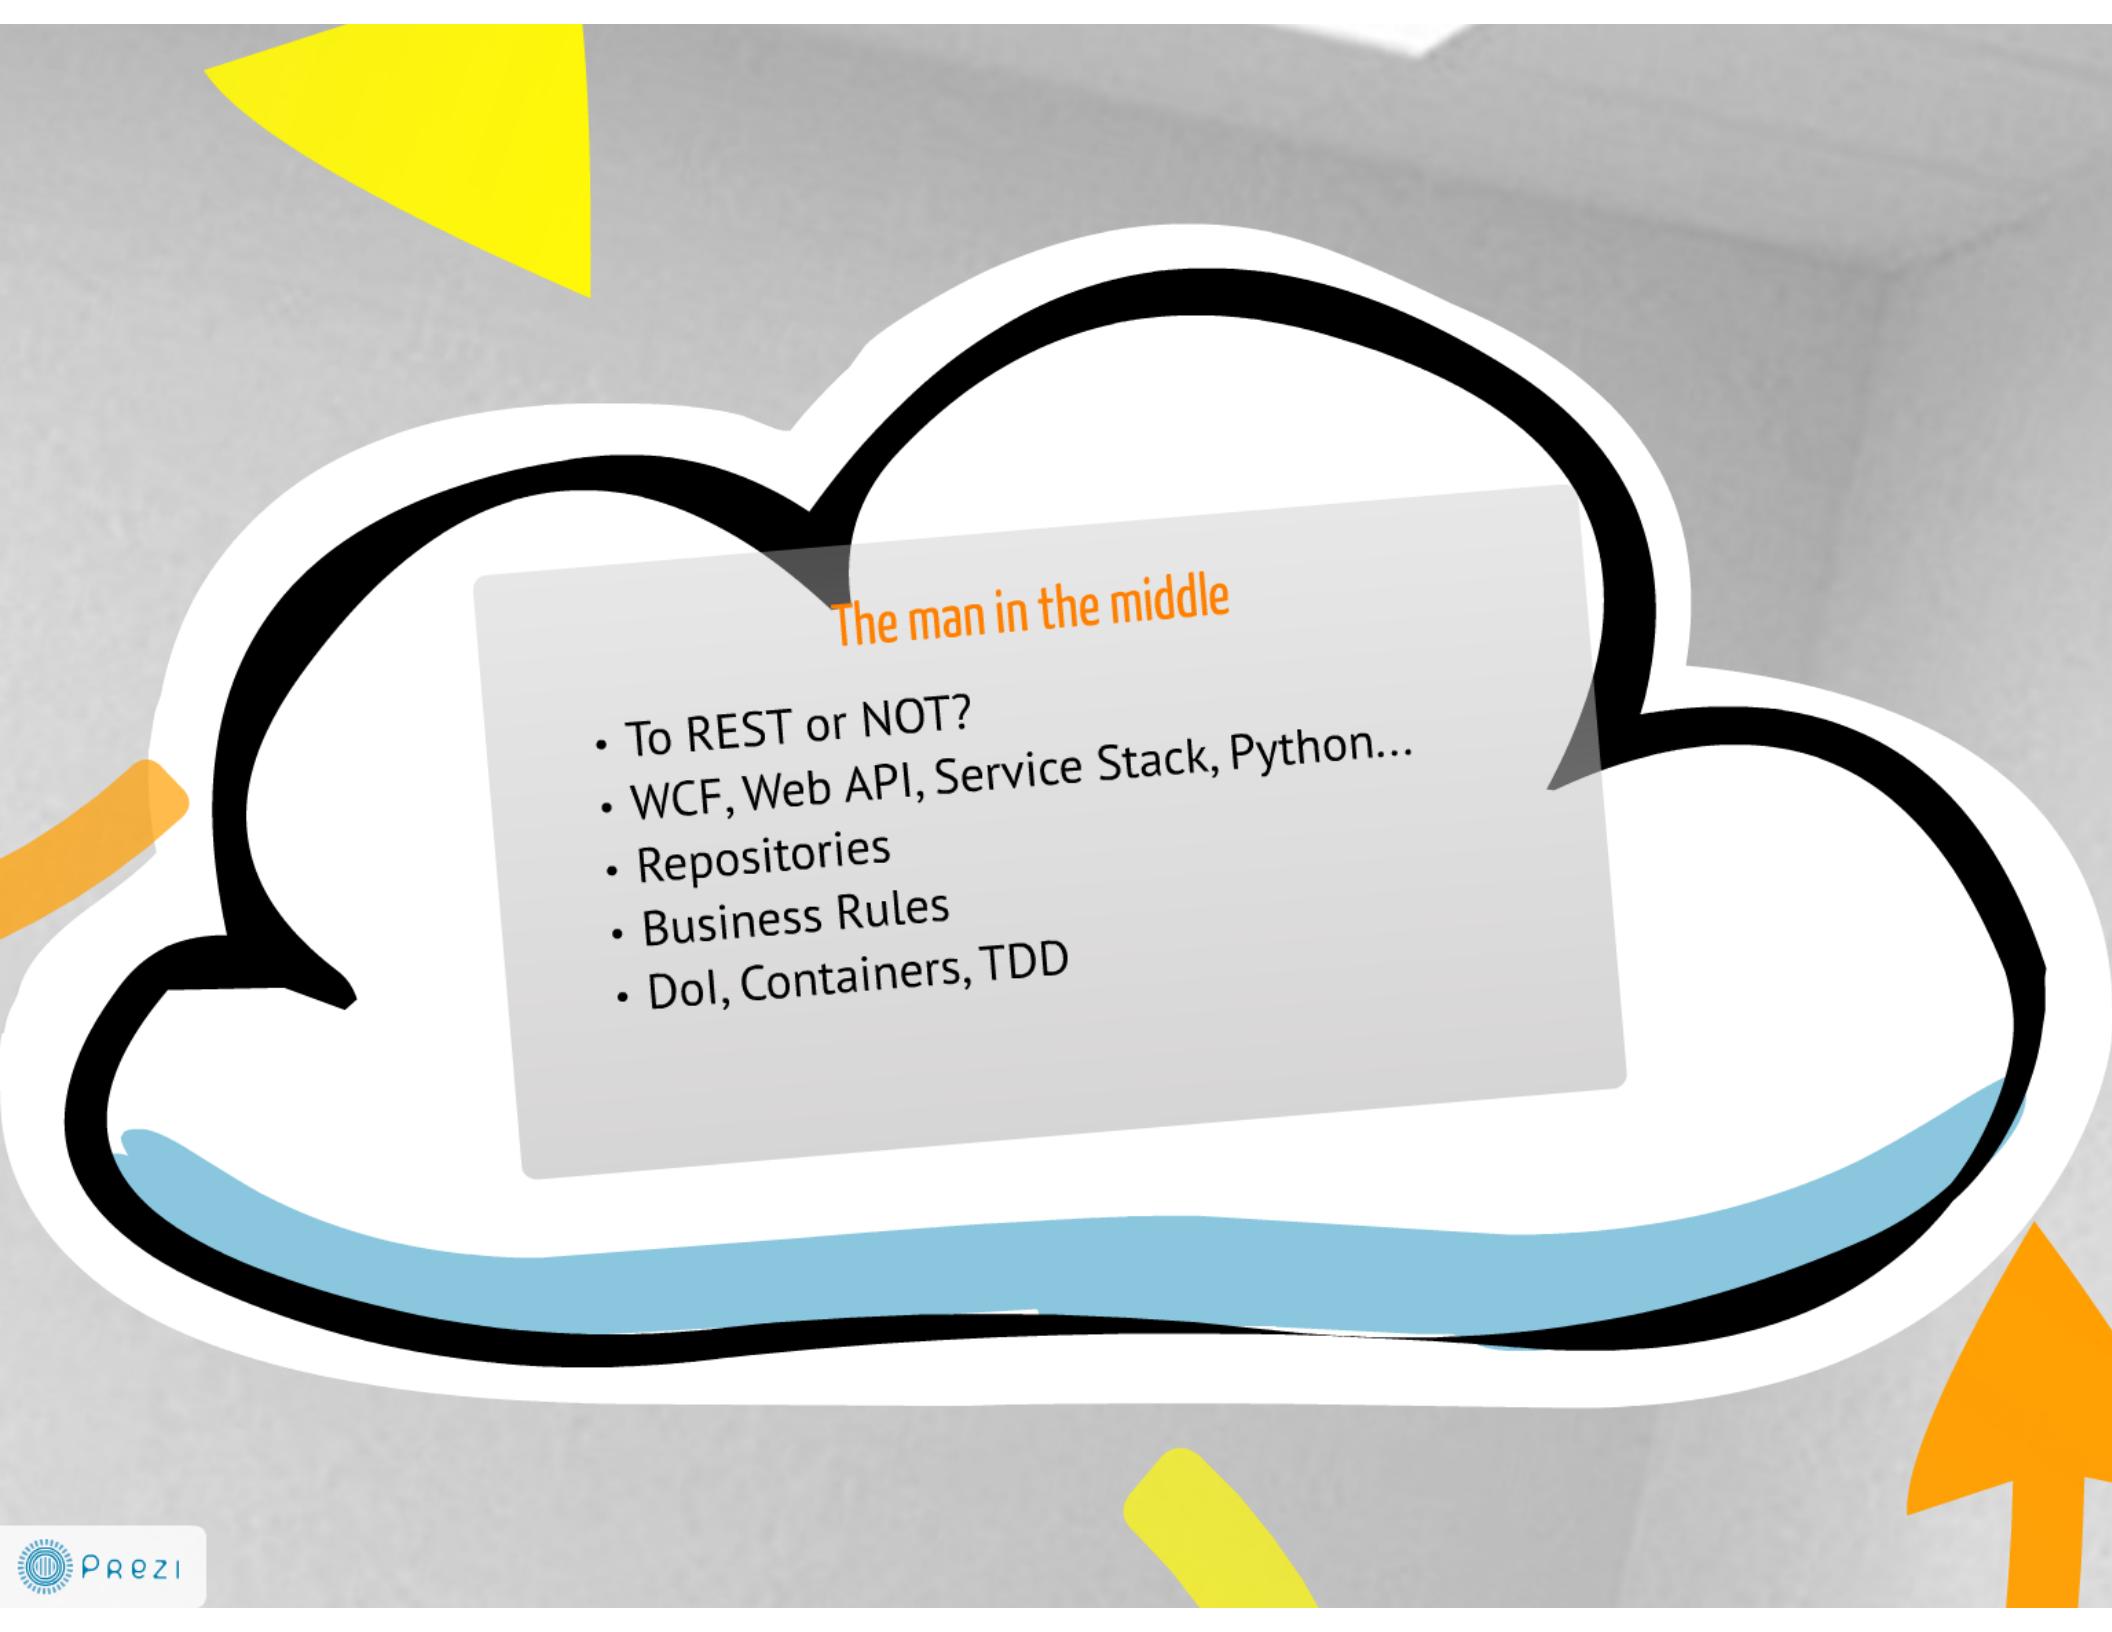

CouchDB

Go for the "Anemic Domain Model" if behavior is not clearly defined.

Build it as a standalone module that could be given to "clients"

The man in the middle

- To REST or NOT?
- WCF, Web API, Service Stack, Python...
- Repositories
- Business Rules
- DI, Containers, TDD

User Xperience

- View Engines
- HTML 5
- MVC Hell! (Batman.js, Backbone.js, Angular.js, ...)
- UI Hell! (Bootstrap, Ext.js, Jquery UI, ...)
- Templates (Mustache, eRuby, Django, Hamlet)
- <http://jster.net/> and <http://todomvc.com/>

User Xperience

- View Engines
